Weeds - Weeds - Weeds

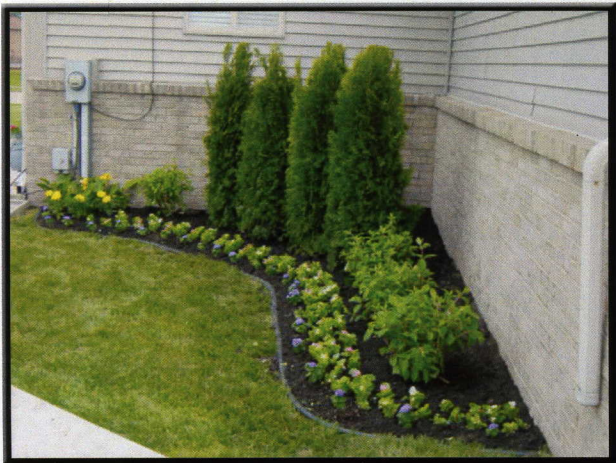

The frequent, heavy rains of May & June have resulted in a bumper crop of weeds - Nutsedge is unusually prevalent this year. Nutsedge is the 3 stem weed that grows about 4 inches higher than the rest of the lawn.

Fall is the best time of the year to control weeds. It is also a great time to overseed the lawn to thicken it up. A thick, dense lawn discourages weed growth.

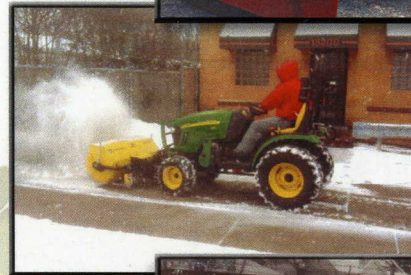

FALL TIPS

- Add sparkle to your landscape with mums. Choose plants that are not quite in bloom for longer lasting color. Water daily and pinch off tops to promote new buds.
- Pansies are another great fall plant for color. They require very little maintenance and love the cold nights.
- Fluff up your mulch with a rake to make it look like new!
- Trim your evergreens & shrubs. They will look great throughout the winter & into spring.
- Trim back & divide your perennials.

THINK ABOUT SNOW!**

This month's featured job is a pond built for a customer in Clinton Township.

The pond was built free form according to customer specs and lined with 45ml Butyl Rubber. There is an upper pond and a lower pond with a waterfall connecting them. The combined size is approximately 900 gallons.

The top pond has a large Bio Filter waterfall and the pump is 3200 GPH. There is a bottom drain which helps filter waste from the bottom and a skimmer which filters out leaves and falling debris.

The lower pond is multi-level and is approximately 36 inches deep. With this depth it supports plant life and fish year round.
